Cloud computing is a concept that many Americans have likely heard about and even use on a daily basis but according to a [recent survey](#) from Wakefield Research for Citrix, the majority of respondents have virtually no idea what it is.

About 29 percent of the 1,006 people polled thought [cloud computing](#) had to do with an actual cloud, the sky or something related to weather.

Furthermore, 51 percent of those surveyed believe bad weather would interfere with cloud computing while only 16 percent correctly understood the phrase

Definitie van cloud

Self service

- Klant verzorgt zijn eigen provisioning
- Direct beschikbaar (geen 2 business dagen wachten)

Overal toegang

- Via het internet
- Op allerlei type clients / devices

Locatie onafhankelijke resource pooling

- Multi tenant
- Virtualisatie

Snelle elasticiteit

- Snel kunnen schalen
- Oneindige capaciteit

Betaal voor gebruik

- Bedrag per dienst
- Bedrag per transactie

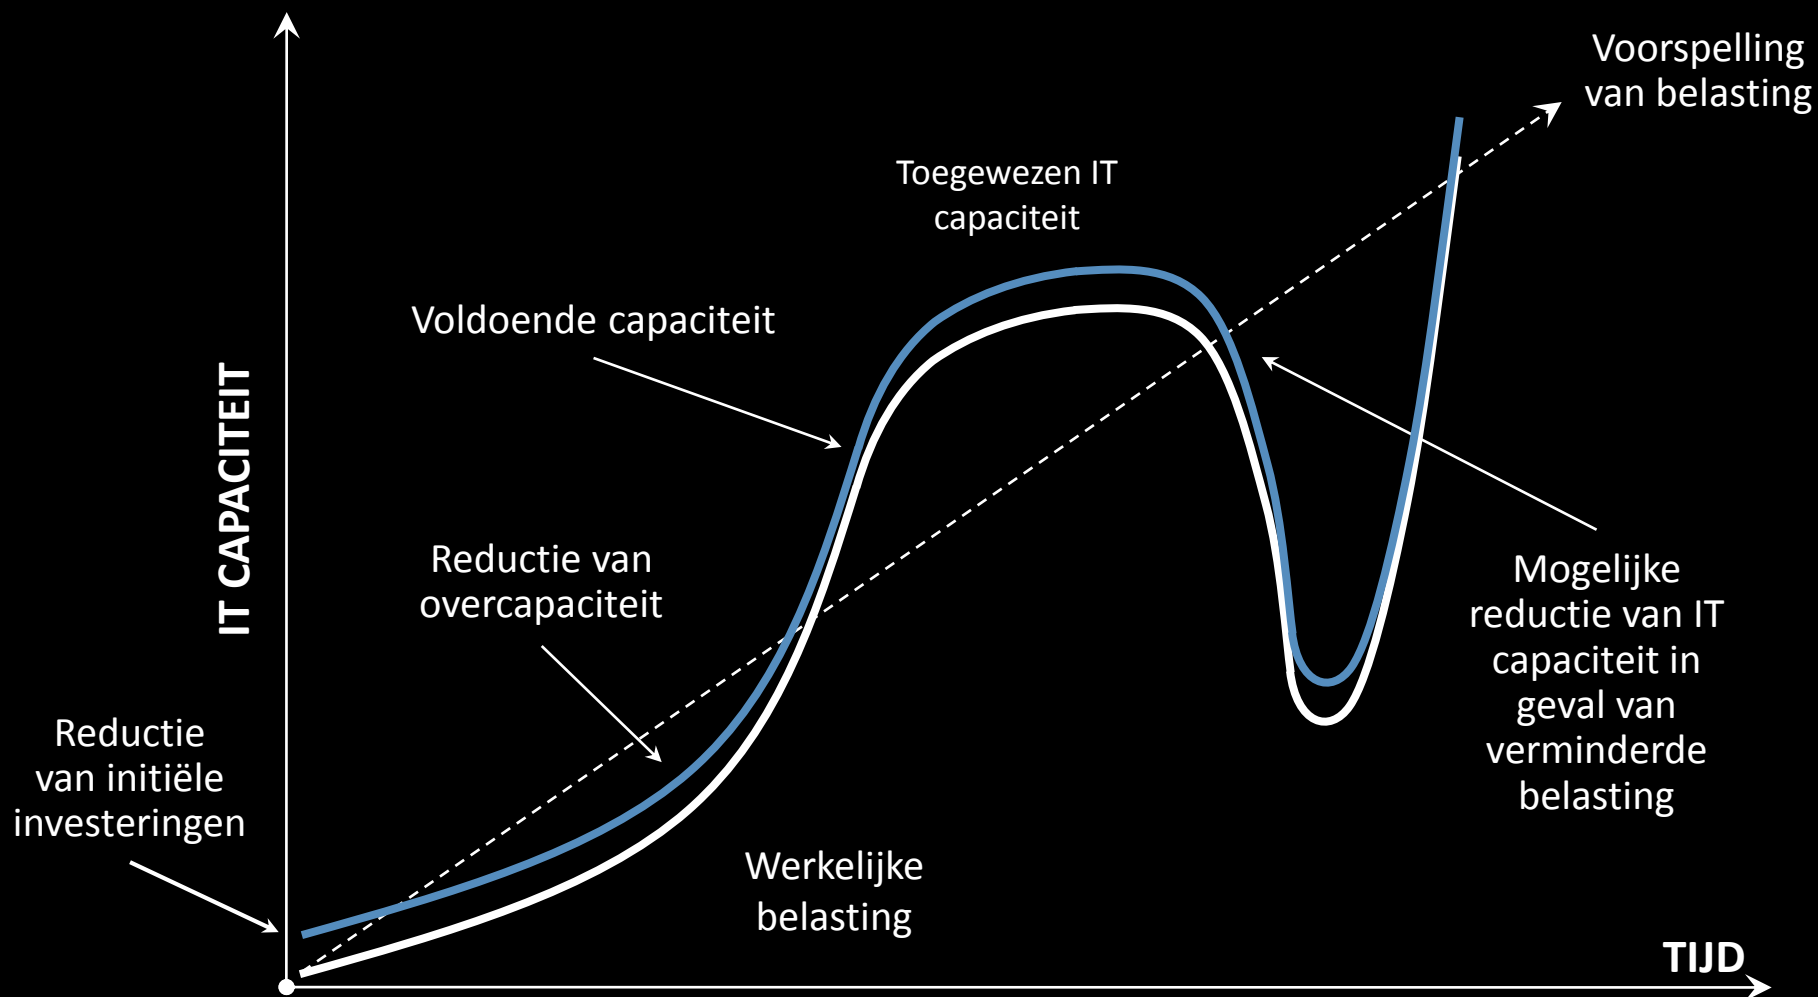

Waarom cloud?

Wat levert het op?

Traditioneel scenario

Cloud scenario

Cloud scenarios

Aan en uit

On & off workloads (e.g. batch job)
Over provisioned capacity is wasted
Time to market can be cumbersome

Snelle groei

Successful services needs to grow/scale
Keeping up with growth is a big IT challenge
Cannot provision hardware fast enough

Onvoorziene piek

Unexpected/unplanned peak in demand
Sudden spike impacts performance
Can't over provision for extreme cases

Voorspelbare pieken

Services with micro seasonality trends
Peaks due to periodic increased demand
IT complexity and wasted capacity

Cloud democratisceert

"By 2020, more than **three-quarters** of the S&P 500 will be companies that we have not heard of yet."

- Professor Richard Foster, Yale University

Wat biedt Microsoft?

Windows Azure

IaaS, PaaS, SaaS?

On Premises	Infrastructure (as a Service)	Platform (as a Service)	Software (as a Service)	You Manage
				Vendor Manages
Applications	Applications	Applications	Applications	
Data	Data	Data	Data	
Runtime	Runtime	Runtime	Runtime	
Middleware	Middleware	Middleware	Middleware	
O/S	O/S	O/S	O/S	
Virtualization	Virtualization	Virtualization	Virtualization	
Servers	Servers	Servers	Servers	
Storage	Storage	Storage	Storage	
Networking	Networking	Networking	Networking

usage based

Global Physical Infrastructure

servers/network/datacenters

Cloud services

Installatie via packages

Ondersteuning voor multi tier applicaties

Automatische applicatie management

Geen state opslaan!

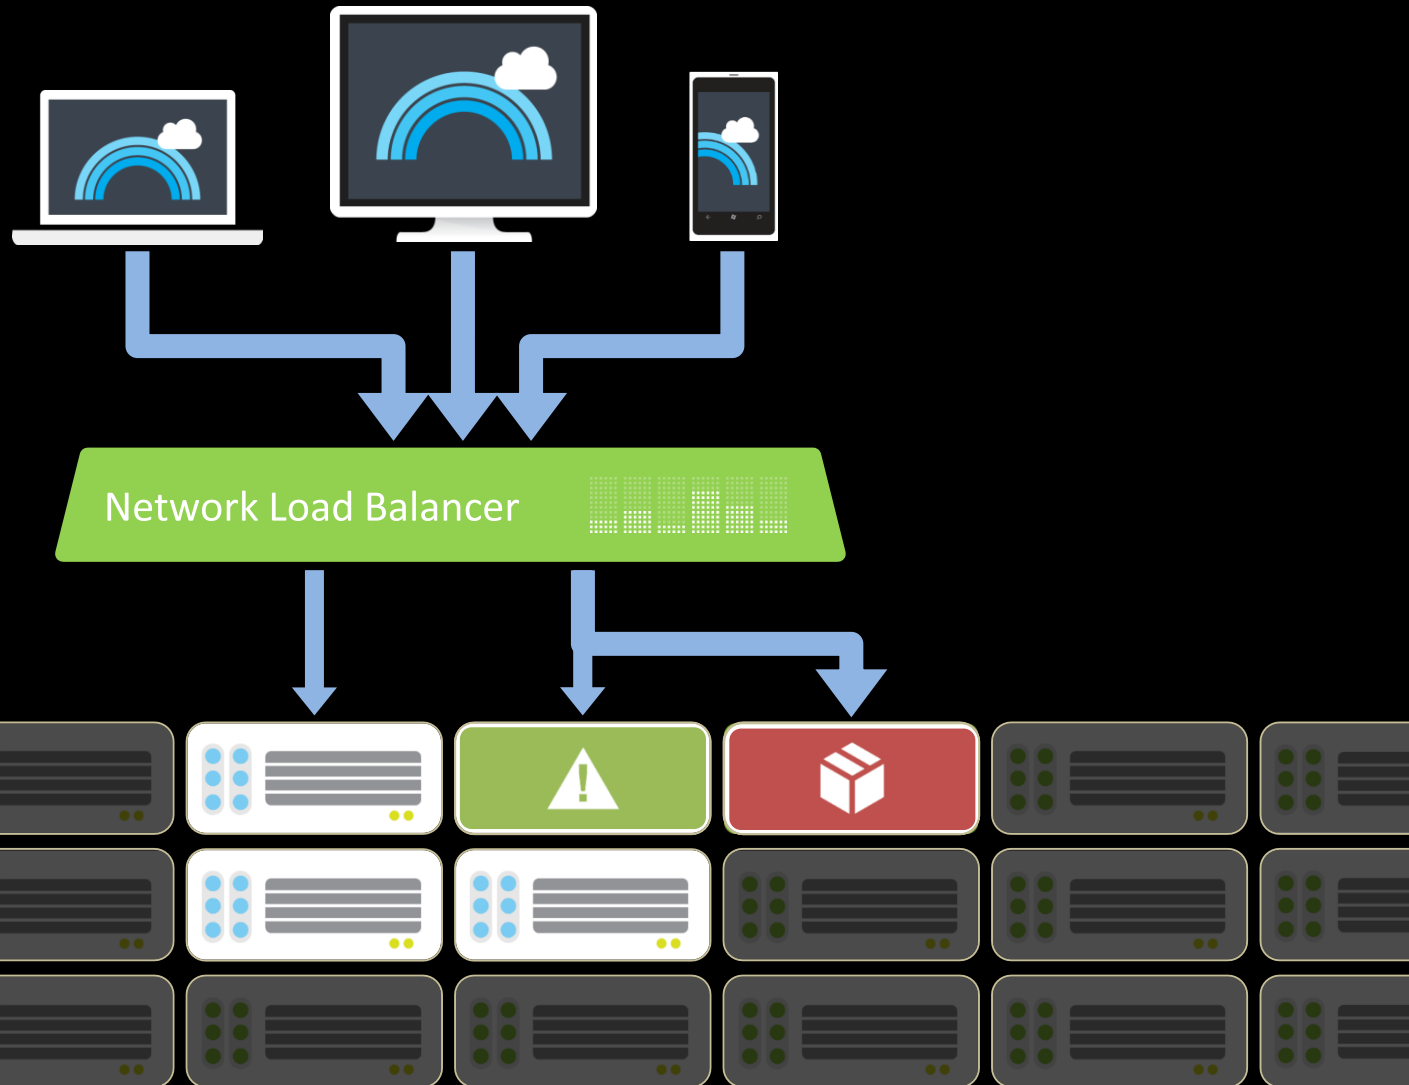

Network Load Balancer

← Network load-balancer configured for traffic

Azure websites

Sandbox IIS omgeving

Bouwen met ASP.NET, Node.js of PHP

Snelle deployment via FTP, Git of TFS

Scale up / down in seconden

Nog in Preview (Geen SLA)

Azure websites

SHARED INSTANCES

RESERVED INSTANCE

Azure websites

reserved  2

Cloud service vs. Azure websites

Cloud services

- Staging en production slot
- SSL support
- Startup tasks
- State gaat verloren

Azure websites

- Shared storage
- Eenvoudige deployment
- Geen installatie van componenten
- Nog in preview

Praktijk .NET

Backend services (WCF)

Relationele database

Veel data en gegevensverkeer

Praktijk voorbeeld

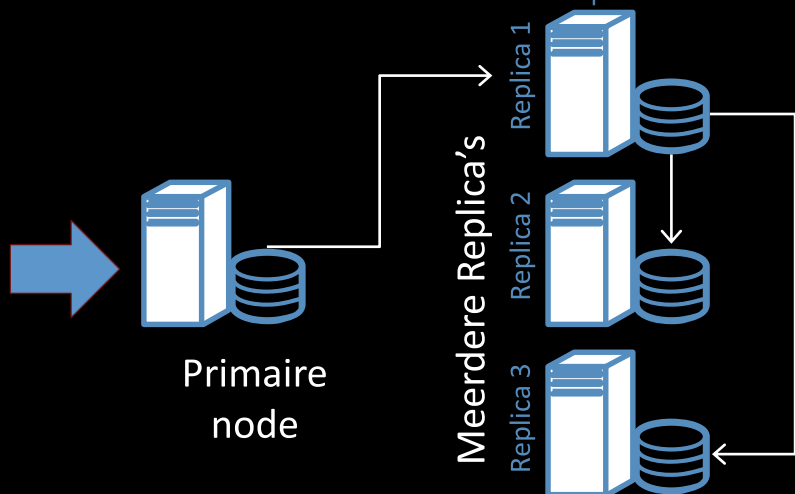

SQL Azure Database

Enkele logische
database as a service

Meerdere fysieke
replica's

Cloud relationele database op
basis van SQL Server engine

Gebruik dezelfde tools, data
access framework, T-SQL taal

Datacenters over de hele wereld

Hoge beschikbaarheid &
Redundantie

- Lezen vindt plaats op de
primaire node
- Schrijf acties worden
gerepliceerd naar de replica's

SQL Server != SQL Azure

- Niet ondersteund in Windows Azure SQL Database

SQL Server Agent

Integrated Full-Text Search

SQL Profiler

Common Language Runtime (CLR)

Service Broker

Filestream Data

Global Temporary Tables

Database Mirroring (T-SQL)

- Elke tabel verplicht een clustered index
- Backup en restore alleen via aparte API (Zelf bouwen)

SQL Azure Migration Wizard

Script Wizard

Select Process
Select the process you want the wizard to walk you through.

SQLAzureMW v3.9.10

This wizard gives you the options to analyze, generate scripts, and migrate database schemas and data from:

- 1) SQL Server to Azure SQL Database.
- 2) Azure SQL Database to SQL Server
- 3) Azure SQL Database to Azure SQL Database

It will also analyze SQL Profiler trace files and TSQL script for compatibility issues with Azure SQL Database.

Analyze Only
☐ SQL Profiler Trace File

Analyze / Migrate
☐ Database
☐ TSQL File

Run TSQL without Analyzing
☐ TSQL File

Server Maintenance
☐ Maintenance

< Back Next > Exit

Retry logic

- Zorg dat je code ook robuust is!
- Verbindingen naar SQL Azure, Service Bus en Storage Account kunnen mislukken
- Bij hoge load kun je *Transient Fault Errors* verwachten
- Gebruik het: *Transient Fault Handling Application Block*

Code sample (1/2)

```
using Microsoft.Practices.TransientFaultHandling;
using Microsoft.Practices.EnterpriseLibrary.WindowsAzure.TransientFaultHandling;
...
// Define your retry strategy: retry 5 times, starting 1 second apart
// and adding 2 seconds to the interval each retry.
var retryStrategy = new Incremental(5, TimeSpan.FromSeconds(1),
    TimeSpan.FromSeconds(2));

// Define your retry policy using the retry strategy and the Windows
// Azure storage transient fault detection strategy.
var retryPolicy = new
    RetryPolicy<StorageTransientErrorDetectionStrategy>(retryStrategy);
```

Code sample (2/2)

```
try {  
    // Do some work that may result in a transient fault.  
    retryPolicy.ExecuteAction(  
        () =>  
        {  
            // Call a method that uses Windows Azure storage and which may  
            // throw a transient exception.  
            this.queue.CreateIfNotExist();  
        });  
}  
catch (Exception) {  
    // All the retries failed.  
}
```

Praktijk WordPress

Websites bij TV uitzendingen

Piekbelasting bij oproep om naar site te gaan

Maak gebruik van caching

Optimalisatie

- Betalen voor gebruik, betekent opruimen!
- Dataverkeer: denk aan grote afbeeldingen, redirects, client side caching
- Storage: denk aan oude logs, historische data in SQL Azure

Vragen?
